

Project Topic 4: Analyze Social Media Engagement to Uncover Brand Performance Insights (SocialTech)

Context:

A social media analytics company (SocialTech) wants to uncover brand performance insights by analyzing influencer and brand engagement across platforms (Instagram, YouTube, TikTok, Facebook). The dataset includes creator profiles, post metadata, engagement metrics (likes, shares, comments), sponsorship details, and audience demographics.

Your role as a data analyst is to explore and analyze this dataset to help the company answer questions about content strategies, posting frequency, audience interaction, and sponsorship ROI.

Business Objective 1: To identify high-engagement content types, hashtags, and platforms to guide brand visibility and content strategy.

Sample of Business Questions

- Which content types (video, image, text) generate the highest engagement rates?
- How does posting frequency affect engagement levels?

Business Objective 2: To understand audience demographics, geography, and posting frequency to personalize campaigns and maximize interaction.

Sample of Business Questions

- How do engagement patterns vary across age groups, genders, and regions?
- Do younger audiences engage more with video content compared to older audiences?

Business Objective 3: To analyze sponsorships and influencer collaborations to uncover ROI drivers and optimize brand partnerships.

Sample of Business Questions

- Which brands perform best across platforms in terms of sponsorship engagement?
- Which campaigns drive the highest visibility and interaction?

Business Objective 4: To evaluate post-level timing, content success, and engagement drivers to refine posting strategies.

Sample of Business Questions

- Which posts generate the most likes, shares, and comments?
- How does posting time (morning, afternoon, evening) affect engagement?
